A diagram showing a circle in the complex plane. The horizontal axis is the real axis, and the vertical axis is the imaginary axis. A thick horizontal line segment is drawn on the positive real axis, starting from the origin and extending to the right. This segment is labeled with a bold 'z' at its right end. The circle is centered at the origin and its radius is equal to the length of the segment 'z'.

GENERAL NOTES FOR STREET TREE PLANTING:

- Proposed street tree locations and species selection requires Parks approval. Proposed street tree locations must be indicated and shall respect the minimum offsets from infrastructure outlined in Victoria Subdivision and Development Servicing Bylaw, Schedule C. Trees planted 1.0m or less from curbs or sidewalks are to have root barriers to protect civil infrastructure.
- Street trees must have one dominant central leader or single straight trunk, 6-8 cm diameter caliper measured 15 cm above ground, and a well-balanced crown with branching starting at 1.8 m - 2.5 m above ground. Trees must be planted per the City of Victoria Supplemental Drawing SD P4 (Tree Planting in Boulevard) and the Canadian Landscape Standard.
- Required Parks inspections for street tree planting:
 - Inspection of soil and planting area prior to planting.
 - Inspection of tree stock prior to planting.
 - Inspection of installed tree. Trees must be in good health and condition with no visible signs of disease, insect pests, or damage, and comply with the latest version of the Canadian Landscape Standard.

GENERAL NOTES:

- All on-site planting areas to be irrigated with a high efficiency drip irrigation system.
- Replacement trees must be planted:
 - At least 2.0m away from a building foundation wall.
 - At least 1.0m away from any property line of a lot, above and underground utility, driveway or other paved surface, and
 - In a location approved by the Director
- Every replacement tree must be spaced from existing trees and other replacement trees in accordance with City of Victoria Tree Protection Bylaw No. 21-035.
- Replacement trees must meet the applicable plant condition and structure requirements set out in the latest edition of the CNLA/CSLA "Canadian Landscape Standard" and the CNLA "Canadian Nursery Stock Standard".
- Replacement trees must be planted during the suitable local planting seasons generally defined as fall (September - November) and spring (February - April). Where planting must occur outside of the prescribed time periods, then a strategy for ensuring the trees are watered (in the summer) and appropriately cared for must be included as part of the tree permit application.
- Replacement trees must be:
 - For sites of development related tree permits, a minimum of 6.0 cm caliper at time of planting for deciduous trees and a minimum of 2.0m height for coniferous trees.
 - Replacement trees may be of a comparable size approved by the Director if obtaining the above sizes is not possible.
- A soil test for the growing media, for each landscape application on City Property must be submitted to the City Parks treepemits@victoria.ca for review at least one week prior to soil placement. Growing media must meet the standards for each specific landscape application as required in the current edition of the Canadian Landscape Standard.
- The Victoria Subdivision and Development Servicing Bylaw No. 12-042 and the associated Schedules can be found on the City of Victoria Bylaws webpage.

Issues		
No.	Description	Date
1	Issued for CALUC	2023/10/14
2	Issued for Development Permit	2023/07/10
3	Re-issued for Development Permit	2023/12/22

IRRIGATION NOTES:

- 1) The irrigation contractor to provide a complete and functioning design-build sprinkler irrigation system.
- 2) The irrigation contractor shall confirm on site the locations of the stub-outs provided by the mechanical contractor.
- 3) The electrical contractor shall supply a 120v outlet in the water entry room and run a 1" conduit with pull string from the water entry room to all stub-out locations. See plans.
- 4) The irrigation contractor shall install the irrigation controller in the water entry room and run all low voltage wires to the solenoid valves.
- 5) Provide rain sensor on system. Location to be determined.
- 6) Flow thru all piping not to exceed 5ft/sec.
- 7) Irrigation contractor to ensure all sleeves, conduits, and location of the rain sensor are coordinated with general contractor.
- 8) The irrigation drawings shall be read in conjunction with the landscape architect's drawings.
- 9) The irrigation system shall be installed as per the landscape architect's specifications and IABC standards or better.
- 10) The mechanical contractor shall install the double check valve and a blow-out connection in the water entry room and run supply lines to all stub-out locations. See plans.
- 11) The irrigation contractor shall provide irrigation system for all street trees to City of Victoria Engineering Requirements.
- 12) The irrigation contractor to submit shop drawings for approval prior to installation.
- 13) The irrigation contractor to provide as-built drawings following construction.

	1	Issued for CALUC	2022/10/14
	2	Issued for Development Permit	2023/07/10
	3	Re-issued for Development Permit	2023/12/22

IRRIGATION NOTES:

- 1) The irrigation contractor to provide a complete and functioning design-build sprinkler irrigation system.
- 2) The irrigation contractor shall confirm on site the locations of the stub-outs provided by the mechanical contractor.
- 3) The electrical contractor shall supply a 120v outlet in the water entry room and run a 1" conduit with pull string from the water entry room to all stub-out locations. See plans.
- 4) The irrigation contractor shall install the irrigation controller in the water entry room and run all low voltage wires to the solenoid valves.
- 5) Provide rain sensor on system. Location to be determined.
- 6) Flow thru all piping not to exceed 5ft/sec.
- 7) Irrigation contractor to ensure all sleeves, conduits, and location of the rain sensor are coordinated with general contractor.
- 8) The irrigation drawings shall be read in conjunction with the landscape architect's drawings.
- 9) The irrigation system shall be installed as per the landscape architect's specifications and IABC standards or better.
- 10) The mechanical contractor shall install the double check valve and a blow-out connection in the water entry room and run supply lines to all stub-out locations. See plans.
- 11) The irrigation contractor shall provide irrigation system for all street trees to City of Victoria Engineering Requirements.
- 12) The irrigation contractor to submit shop drawings for approval prior to installation.
- 13) The irrigation contractor to provide as-built drawings following construction.

OFFSITE IRRIGATION LEGEND

1. All irrigation work, including required inspections, shall follow the Supplementary Specifications for Street Trees and Irrigation, within the Victoria Subdivision and Development Servicing Bylaw 12-042, Schedule C, and comply with the Irrigation Industry Association of BC standards.

2. Irrigation design shall be submitted for review and approval to City of Victoria Parks no less than 30 days prior to scheduled installation.

3. Contact Parks at 250-361-0600 with at least 48 hours notice to arrange for irrigation inspections.

Required Parks inspections for irrigation:
A. Irrigation sleeving prior to backfilling.
B. Open trench mainline and lateral lines.
C. Pressure test.

4. Irrigation system, controller, coverage test, backflow preventer assembly test report required, backflow assembly (incl. inspection tag and testing report).
